

Gates

One of the most popular items available from **DENNIS T. KONDO**, are the Custom Gates for office, laboratory and institutional furniture system environments. They can be fabricated in finishes to match HMI, HW, S/C, as well as other Systems and standard Wilsonart, Formica, Nevamar, Pionite, Laminart and Micarta high pressure plastic laminate finishes. Hardwood veneer finishes to match Customer samples, are also available. The gates provide an ideal solution for those areas requiring separation, yet still maintain a consistency with the open space plan. They are frequently used to separate public from private areas. Various levels of security can be obtained from the choice of optional locks, latches, hinges and stop columns.

Gates provide a visual and physical separation of areas.

The basic gate has a clean, unobtrusive appearance. By its very simplicity, it blends in with almost any office or lab environment. They are easily attached to hard walls, panels or partitions with screws or panel connectors. Matching filler panels are also available.

The basic gate comes standard with a heavy duty, bi-directional, pivot hinge, finished in a neutral matte black. It is self-closing and does not require a lock or latch. This provides for a simpler, quicker installation, as no strike plate or stop lineup is required. It also eliminates impact problems, such as jarring panels out of alignment or the disruption of adjacent work stations. However, if additional security is required, a number of options (see the back of this page) are available. ADA conforming lever locks, special latches, hinges, kickplates as well as custom detailing, are all available as options.

Ordering or obtaining a quote is as simple as providing **DENNIS T. KONDO**, with the information regarding the space available in width, the desired height, finish and options. The gate panel comes pre-mounted to the hinge jam post and is shipped ready to be field attached to a wall, or end panel connector, by your installers.

Gates are available in real wood veneers and plastic laminates.
